

ARTBOOK

Out of Sight

UJI Game Jam 2026 · Spooky Edition · 48 hours

All art by Julia Fernández Bermejo

01

The theme

If You Can’t See It, It Doesn’t Exist!

THEME OF THE UJI GAME JAM 2026 · SPOOKY EDITION

The jam handed out a theme and an optional second one: a palette of eight colours called SLSO8. Both ended up written into the filenames. Nearly every sprite exists twice, once as `Dark` and once as `Light` — same shape, different colour. That is the whole game, in two files.

`0d2b45` `203c56` `544e68` `8d697a` `d08159` `ffaa5e` `ffd4a3` `ffecd6`

91,4 %

of the in-game pixels land exactly on one of those eight colours

7 / 8

of the palette shows up in the sprites — the orange was saved for the interface

16 px

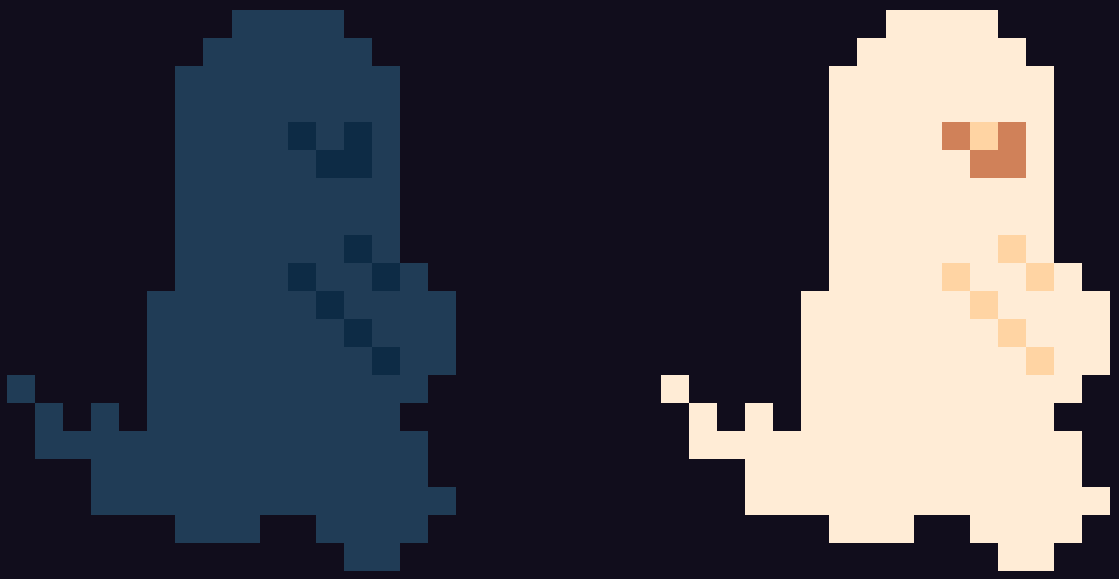

the grid it is all built on: tiles, characters, the lot

The remaining 8,6 % is not a second palette. It is the trail left by flattening layers on export — near-twins sitting one unit away from `ffd4a3`. Counted, not assumed.

02

The ghost

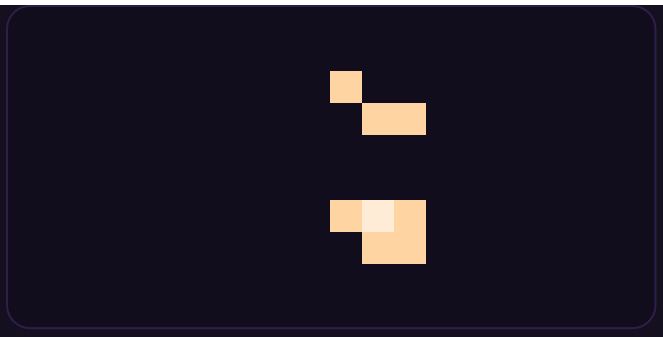

A ghost is off to visit its ghost grandparents in another cemetery, and the way there runs down a street full of humans. Two things happen at once: the humans are frightened of the ghost, and the ghost is frightened of them screaming. So it does everything it can not to be seen.

FantasmaSideDark.png · FantasmaSideLight.png

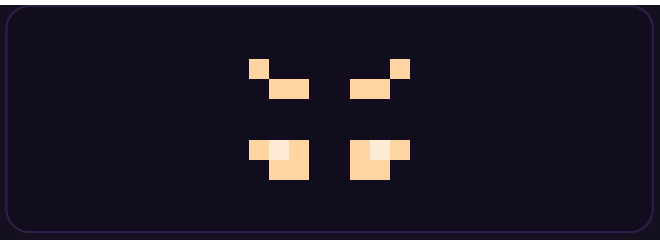

16 × 32 px

One silhouette, two colours. Nothing else changes — and that is the mechanic in full: in the dark, nobody sees you.

FantasmaOjosSpritesheet.png

16 × 8 px · 2 frames

the sheet itself

8 × 8 px per frame

The blink is two frames of eight by eight pixels. At that size an eye is three pixels, and closing it means moving one of them.

03

The humans

Two passers-by walk the street: a top hat and a wide skirt, four frames each. They are not chasing anyone. The danger is quieter than that — if one of them stands under a streetlight at the same time as the ghost, the ghost is seen, and the walk starts again from the last checkpoint.

NPC1_0 – NPC1_3.png

16 × 32 px · 4 frames

NPC2_0, _1, _2, _4.png

16 × 32 px · 4 frames

The second one is numbered 0, 1, 2 and 4. There is no `NPC2_3` on disk — the frame is inside the spritesheet, but it never came out as its own file. Jam arithmetic, left as it was found.

NPC1Spritesheet.png

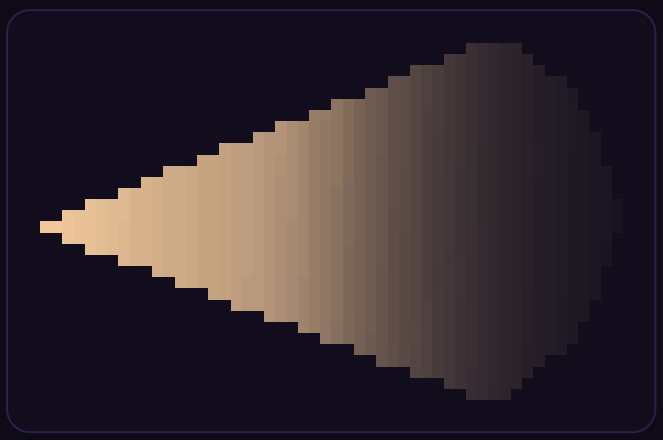

64 × 32 px

NPC2Spritesheet.png

64 × 32 px

The ones carrying a torch

LuzLinterna.png

52 × 32 px

NPC1Dark.png

16 × 32 px

NPC2Dark.png

16 × 32 px

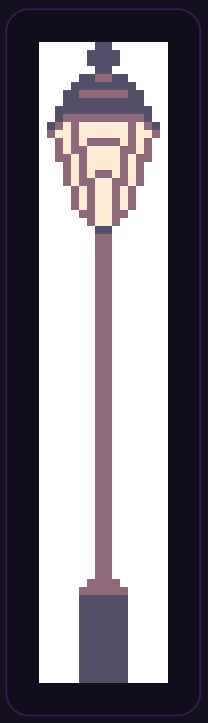

Some humans patrol with a torch, and that beam gives you away just as well as a streetlight. Fifty-two pixels wide, and the only moving light in the game.

04

The streetlight

The most worked-on object of the jam, and the one the game is built around. It was redrawn from scratch four times, the canvas widening each time to make room for more light.

Four generations

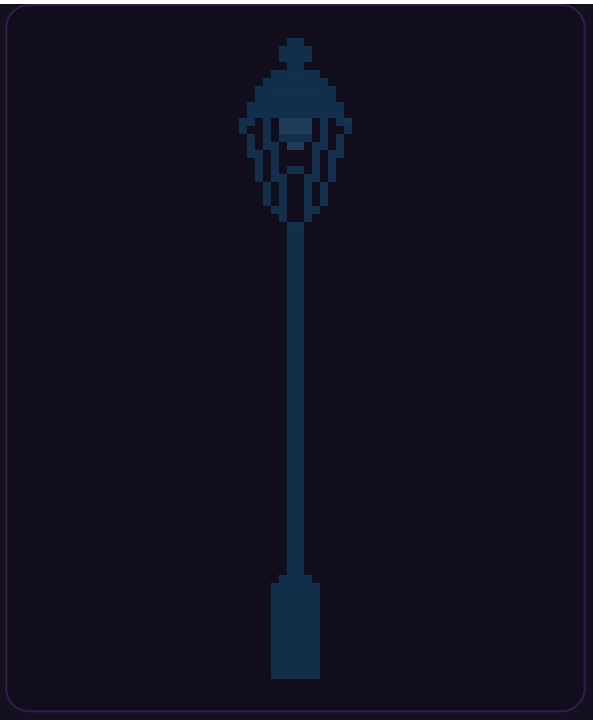

16 × 80 px

a winding post, scrapped

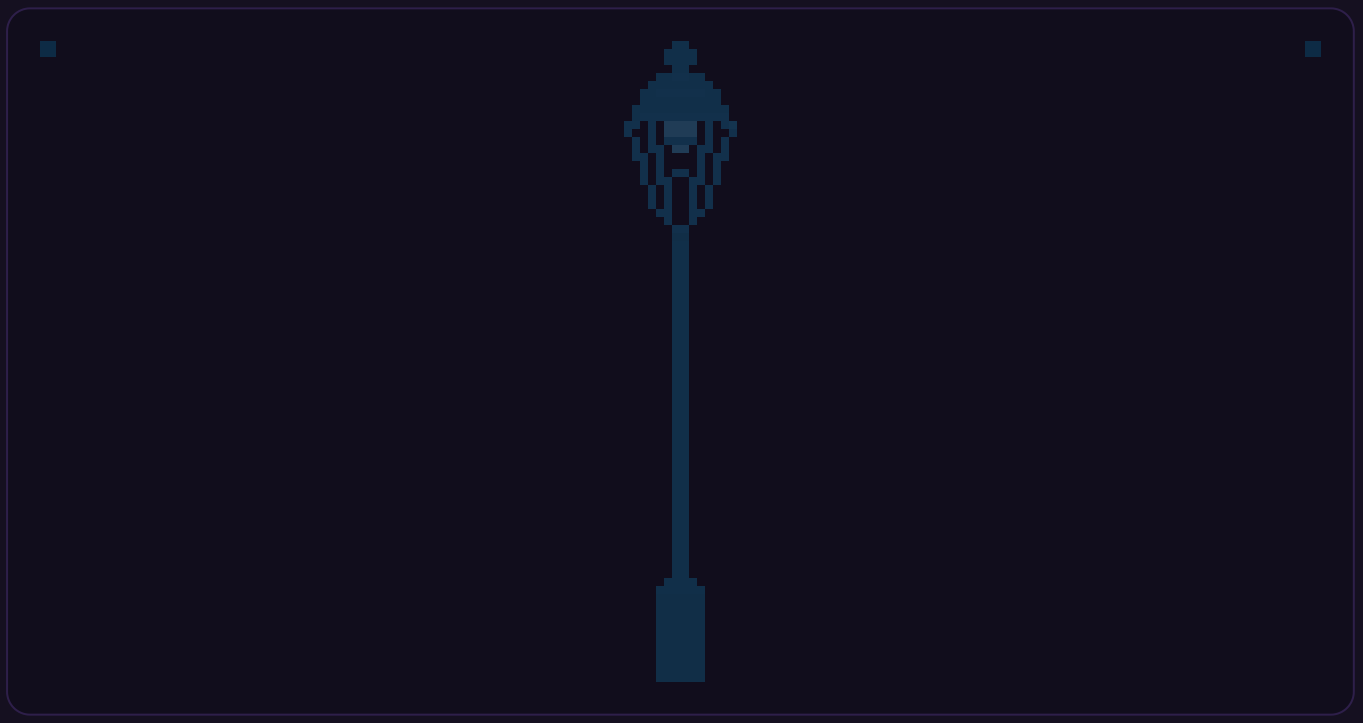

64 × 80 px

straight, and lit

64 × 80 px

the in-game one

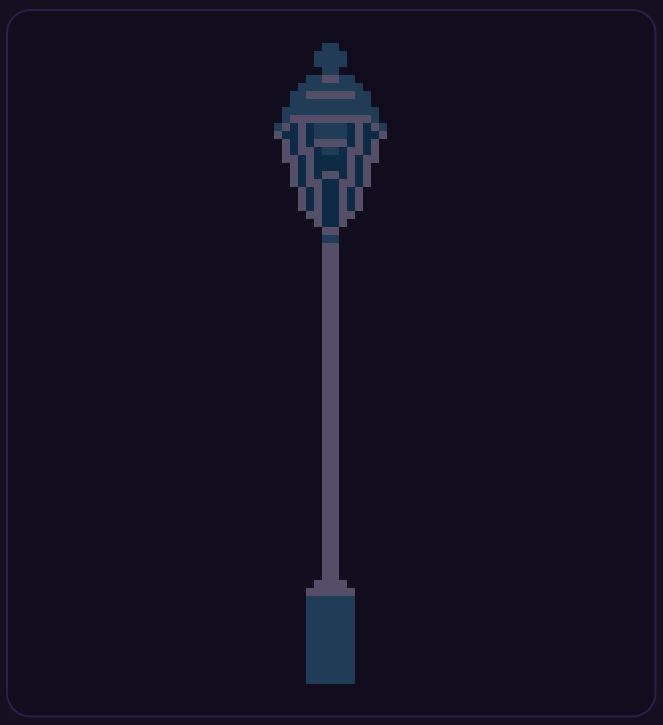

160 × 80 px

the menu one

The first one was sixteen pixels wide and curled like wrought iron. It went. What replaced it is plain, straight and symmetrical — because the light had to fall in a readable cone, and a winding post throws a crooked shadow. It still carries the white of its canvas: transparency came later.

Seven states

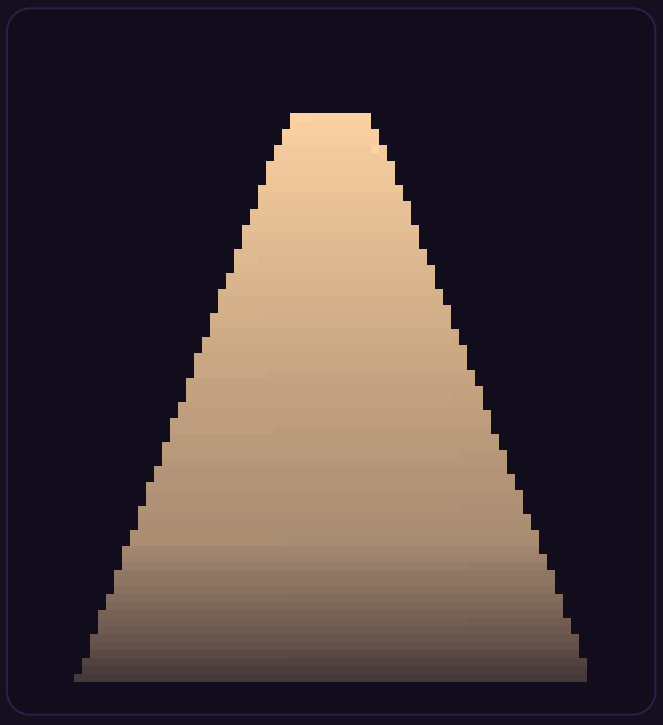

FarolaApagada.png

64 × 80 px

FarolaEncendida1.png

64 × 80 px

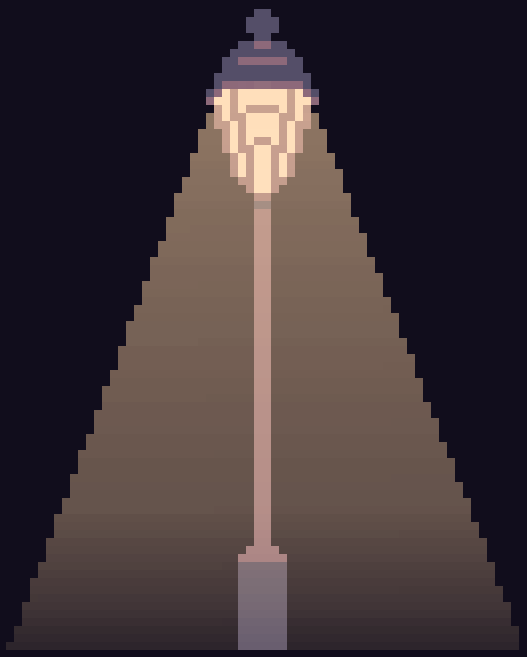

FarolaEncendidaConoLuz.png

64 × 80 px

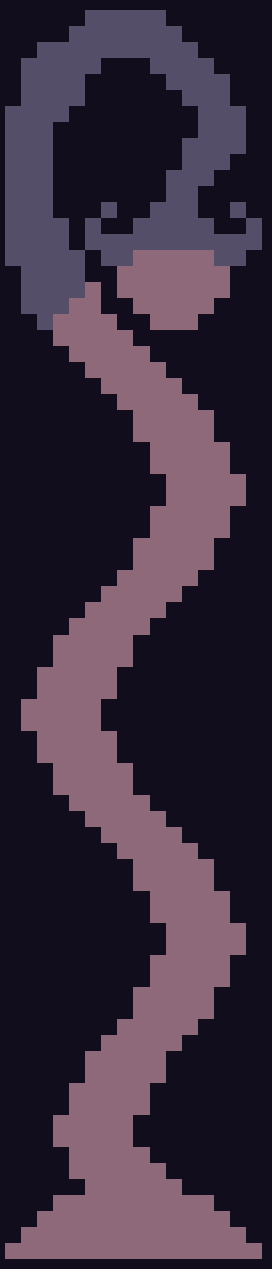

FarolaEncendidREFERENCIA.png

64 × 80 px

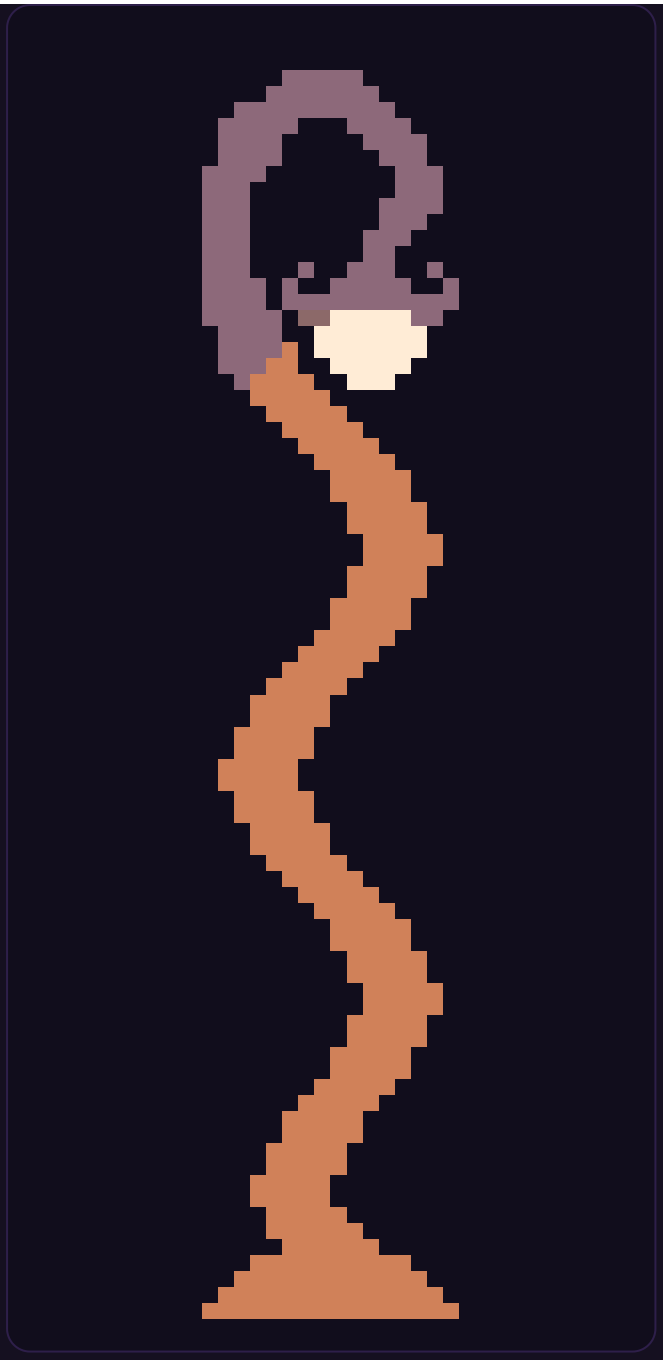

FarolaEncendidREFERENCIA2.png

64 × 80 px

FarolaDark.png

16 × 80 px

FarolaLight.png

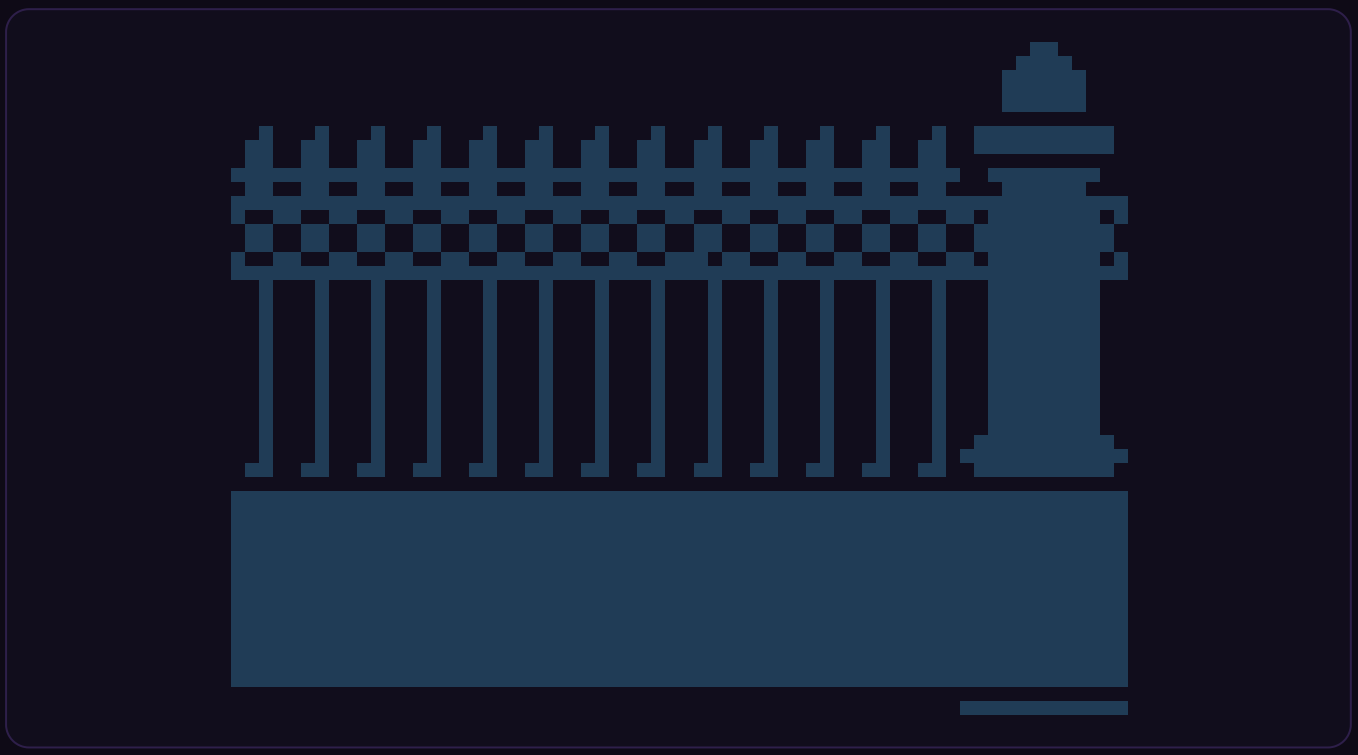

16 × 80 px

The cone lives in its own file, apart from the post. That is what lets the light turn on without redrawing the lamp — and the two files named `REFERENCIA` are the ones kept on screen while painting the rest, to keep the brightness honest.

05

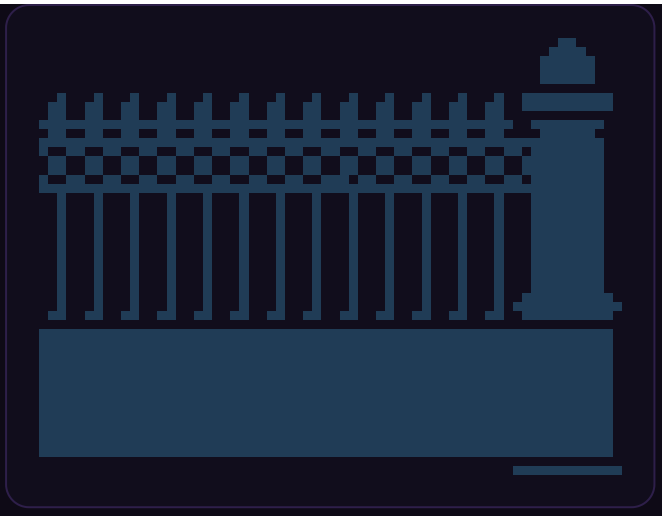

The street

Wrought-iron railings, a pavement and a drain. Three pieces, repeated, are the whole road to the cemetery.

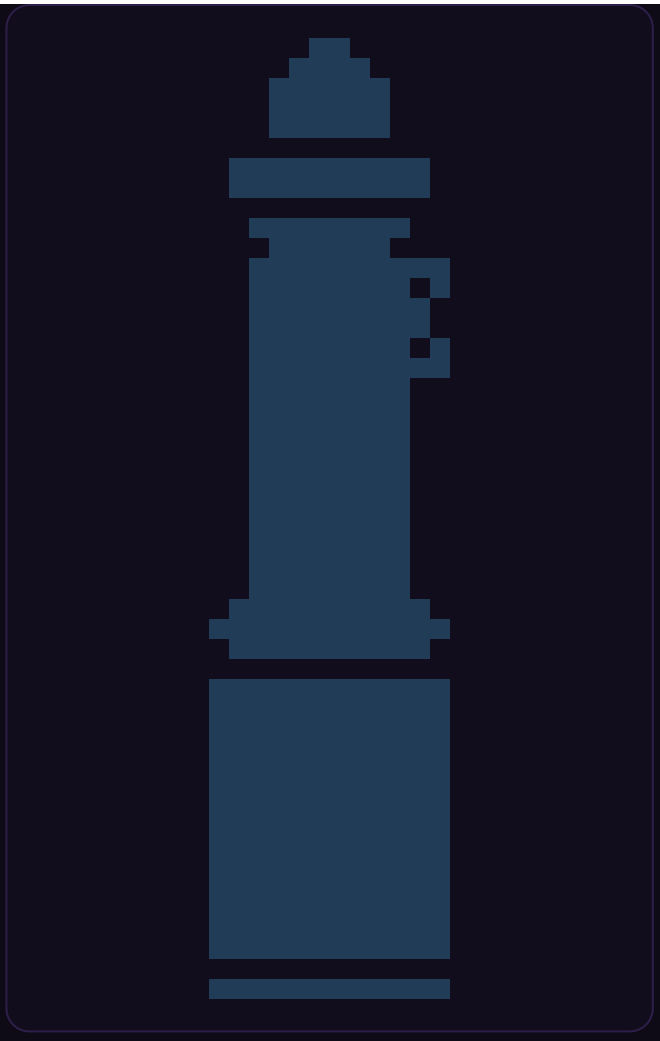

Muro.png

64 × 48 px

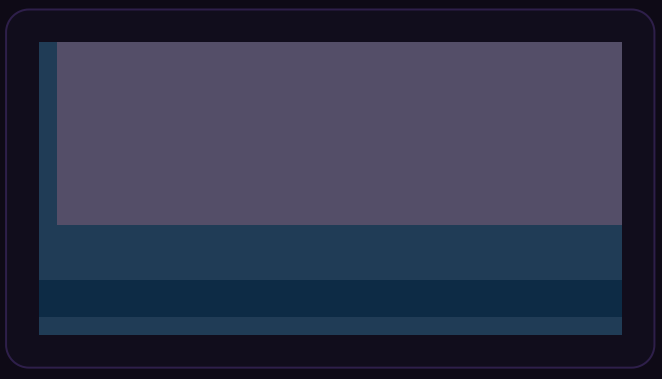

MuroCierreDerecha.png

64 × 48 px

MuroCierreIzquierda.png

12 × 48 px

Suelo.png

32 × 16 px

alcantarilla.png

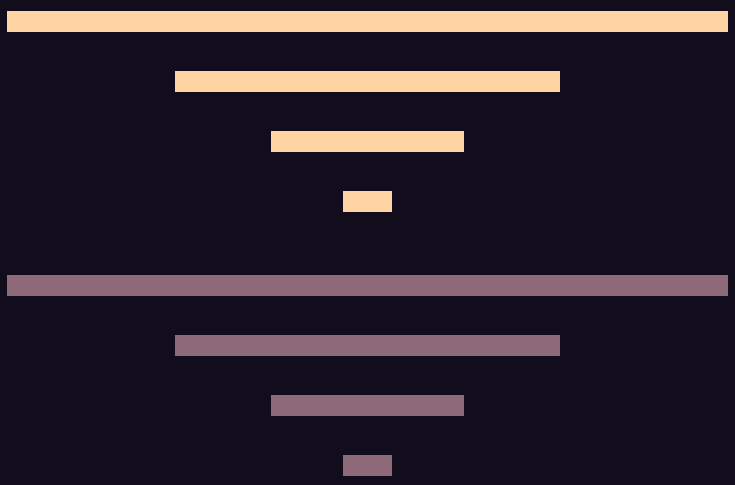

16 × 9 px

The drain is nine pixels tall and it is the only place to hide. Everything else in this chapter is scenery; this one is a verb.

06

Light and colour

The smallest files in the whole project: eight strips, one pixel tall, in two colours. They are a beam fading out, frame by frame — sixty pixels of light, then thirty-two, then sixteen, then four.

Brillo1 — Brillo4 · Naranja / Morado

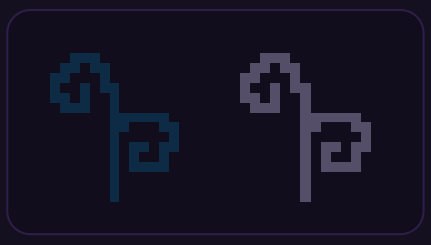

60 × 1, 32 × 1, 16 × 1, 4 × 1 px

Four plants, twice

Planta1

16 × 16 px

Planta2

16 × 16 px

Planta3

16 × 16 px

Planta4

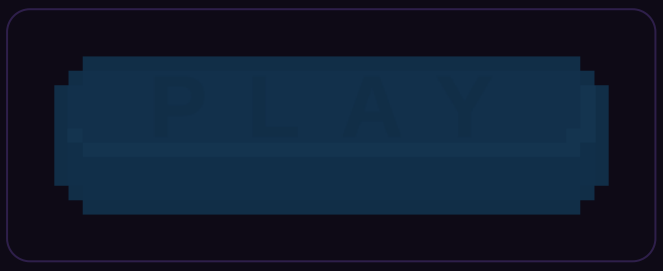

16 × 16 px

Hover or tap any of them to swap palettes. A sprout is twelve pixels of plant, and it still gets two moods.

07

The menu that looked broken

Open the game and there is almost nothing on screen. Most people think it is broken. What you have to do is click the bulb of the streetlight — the one that is flickering — and once it is lit, the buttons are there and you can play. The same thing this page did to you at the top.

BotonPlayOscuro.png

before

BotonPlayIdle1.png

after

Three states, three buttons

Boton{Play,Credits,Back}{Idle,Selected/Highlted,Pressed}.png

450 × 143 px

These are the only pieces in the game that are not pixel art. At 450 by 143 they sit off the 16-pixel grid entirely — painted soft and round, where everything else is hard-edged. The interface is allowed to be made of a different material than the world.

BotonW.png

90 × 90 px

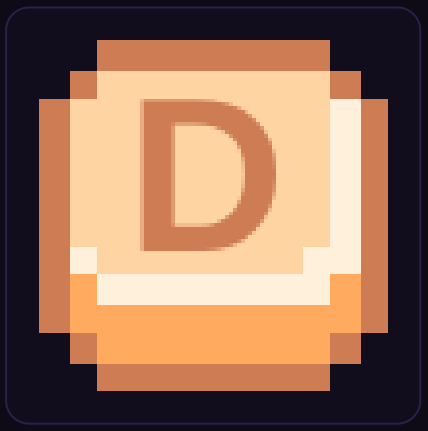

BotonA.png

90 × 90 px

BotonS.png

90 × 90 px

BotonD.png

90 × 90 px

The four keys are the only vector drawings in the project. Everything else was placed pixel by pixel.

08

Process

Krita keeps a copy of the previous save next to every file. Thirty of them survived the jam, and together they are a record nobody meant to keep: the state of each sprite one step before the one that shipped.

Checking the scale

`Muro.kra~`

with the lady in it

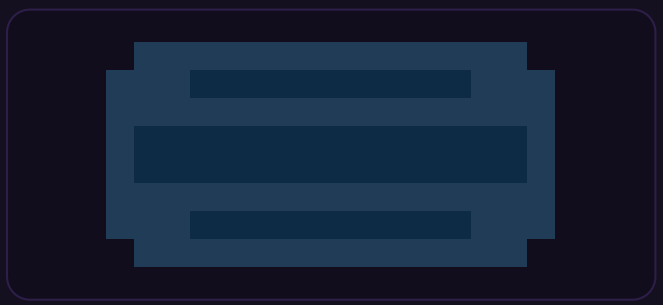

`Muro.kra`

finished

The lady is standing inside the railing file. She was pasted in to see whether the bars came up to her shoulder, and then painted out. Nothing in the finished tile says she was ever there.

Growing by one pixel

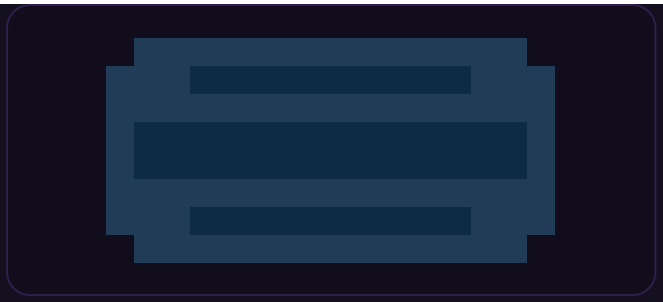

`alcantarilla.kra~`

16 × 8 px

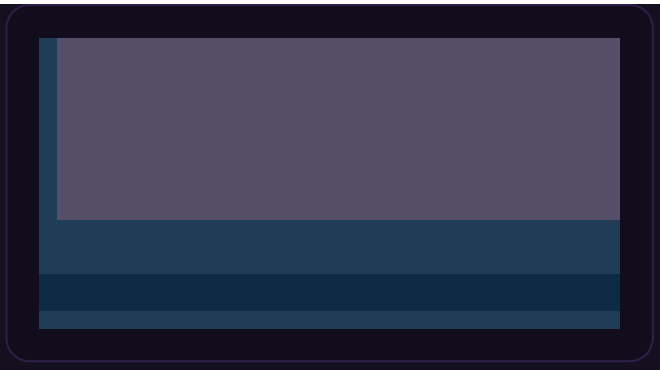

`alcantarilla.png`

16 × 9 px

Suelo.kra~~

16 × 8 px

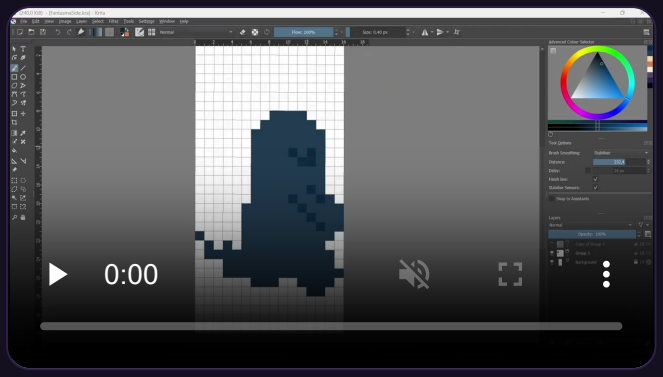

Suelo.kra~

32 × 16 px

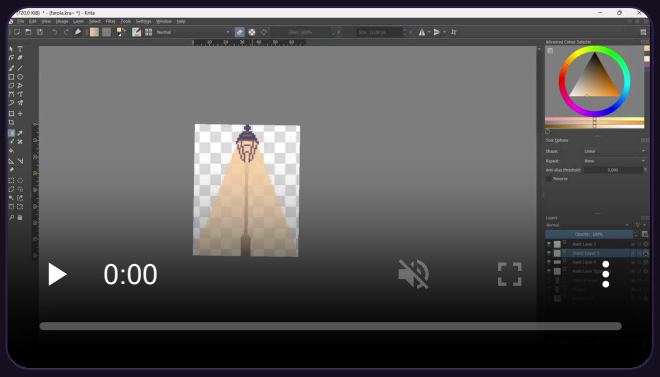

There is no `Suelo.kra` any more. It was reused through Save As to make `alcantarilla.kra` and `Plantas.kra`, and the original lost its name along the way. The two backups above are all that is left of it — which is also how the drain and the plants came to be born on the pavement's canvas.

Watching it happen

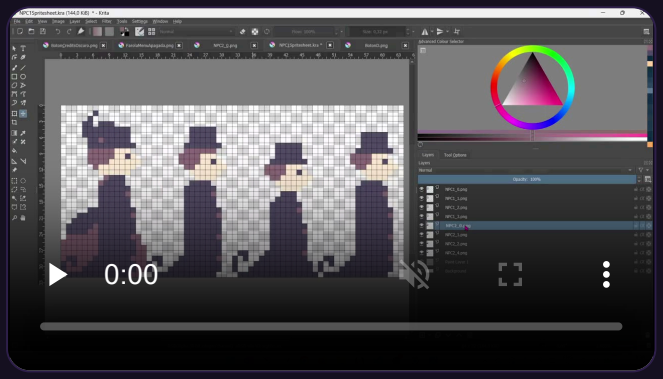

`Fri 21:22 — 22:17`

The ghost, from an outline to a silhouette, and then the same silhouette twice: once for the light, once for the dark.

`Sat 17:14 — 18:03`

The longest stretch of the jam. The streetlight is drawn, scrapped, redrawn, and finally given its cone of light on a layer of its own.

`Sun 00:23 — 00:43`

Past midnight: the lady gets her four frames and her spritesheet. Twenty minutes before the last file of the jam is saved.

Five and a half hours of screen recording survived the jam. These three are the whole of it, sped up — one frame every few seconds — and they do not start downloading until you press play.

Forty-eight hours

`Fri 21:22`	Screen recording starts. The ghost is the first thing drawn.
`Fri 23:34`	Dark and Light versions of the ghost, the blink, the first two humans.
`Sat 13:53`	The street: railings, pavement, drain.
`Sat 15:23`	The plants and the one-pixel beams, in both palettes.

Sat 17:14	The longest stretch of the jam — an hour and thirty-five minutes, all of it the streetlight.
Sat 19:43	The interface begins: Play, then Credits, then Back.
Sat 22:04	The torch beam, and the humans get their walk cycles.
Sun 00:42	The last file saved is the menu streetlight. The first thing a player sees was the last thing drawn.

THE END

Credits

All the art in this book was made by Julia Fernández Bermejo during the jam — every sprite, the environment, the light, the interface. The only piece of art in the game that is not hers is the checkpoint statue. She also put together the itch.io page and cut the trailer from footage captured inside Unity.
